Summary

AI-driven professional with a strong foundation in machine learning, advanced analytics, and data science, eager to apply expertise to complex workforce challenges. Proven ability to translate intricate data questions into robust analyses and predictive models, delivering actionable insights for stakeholders. Skilled in Python for building, validating, and refining statistical and machine learning models, with hands-on experience in data preparation, feature engineering, and model evaluation across diverse datasets. Committed to leveraging AI-native approaches and emerging technologies to drive evidence-based decision-making and contribute to innovative digital platforms.

Professional Experience

Moonbridge Systems (Fiverr)

Remote

Freelance AI/ML Developer

- Led the end-to-end development and delivery of 10+ AI/ML projects for international clients, focusing on computer vision

- Translated complex technical findings into clear, actionable business recommendations, directly informing client strategy and decision-making.
- Partnered with stakeholders to define data-driven success metrics and communicate project results, ensuring alignment with business objectives on digital platforms.
- Applied rigorous data-driven analysis to solve real-world business problems, demonstrating full ownership from problem definition through insight delivery.

Education

FAST NUCES, Lahore

BS (Artificial Intelligence)

2022 – Present (Expected 2026)

Lahore Grammar School, Johar Town

A-Levels

08/2019 – 11/2021

Skills

Advanced Analytics & ML: Python, PyTorch, TensorFlow, Scikit-learn, XGBoost, Statistical Modeling, Machine Learning Models, Predictive Modeling, Experimental Design (conceptual), Causal Inference (conceptual)

Data Science & Engineering: Pandas, NumPy, SHAP, LIME, Matplotlib, Feature Engineering, Data Preparation, Model Evaluation, Large Complex Datasets, Data-Driven Analysis

Agentic AI & LLMs: LangChain, Gemini API, RAG (FAISS, Sentence Transformers), Prompt Engineering, Autonomous Workflows, AI-related technologies

MLOps & Deployment: FastAPI, REST APIs, ML Pipelines, Post-Training Quantization (PTQ), Git

Platforms & Tools: Jupyter, Google Colab, VS Code, GitHub, CVAT, n8n workflow automation

Thermal Image Dataset & Annotation Pipeline

Curated a structured thermal image dataset using CVAT, annotating 500+ infrared frames with bounding boxes and keypoint labels, and implemented preprocessing and quality-control workflows to ensure training-ready data.

Built an automated n8n pipeline to continuously sync CVAT annotation updates, merge bounding box and keypoint label formats, and auto-export consolidated COCO-format JSON datasets, eliminating manual dataset management overhead.

Explainable Multi-Modal Cancer Diagnosis System

Applied rigorous, AI-native data-driven analysis combining MRI/CT imaging and structured clinical data across 3 cancer types, achieving 0.77 accuracy and 0.75 weighted F1-score on held-out test sets.

Integrated SHAP and LIME explainability to translate complex model decisions into human-readable feature importance reports, supporting clinical decision-making stakeholders with clear, applicable insights.
